

# PhysLoad

Measure weights and masses

The **PhysLoad** is a modern, rugged and true to our spirit, low-cost balance that allows the measuring, recording, and plotting of mass in real time to offer an insightful demonstration of the dynamics of changing mass. The need of no prior configuration and inclusion of a hardware tare button (in addition to software control), make it an exceedingly simple instrument to operate.

## Typical Applications

- Range: 5 kg
- Resolution: 0.1 g
- IP54 rated splash-and-dust protection
- Hardware tare
- No configuration required
- PhysInstrument Class: Digital
- Connects with PhysLogger

QS-M-5 www.qosain.pk

## Features

Study the dynamics of water discharge

Discover the siphon effect

Find out the burning rate of a candle

Hot pluggable

Investigate and compare volatility

Connects with PhysLogger

Just simple mass measurements!

Compare fluid viscosities

Portable

Compact and lightweight
